C# Basics. Task Instructions.
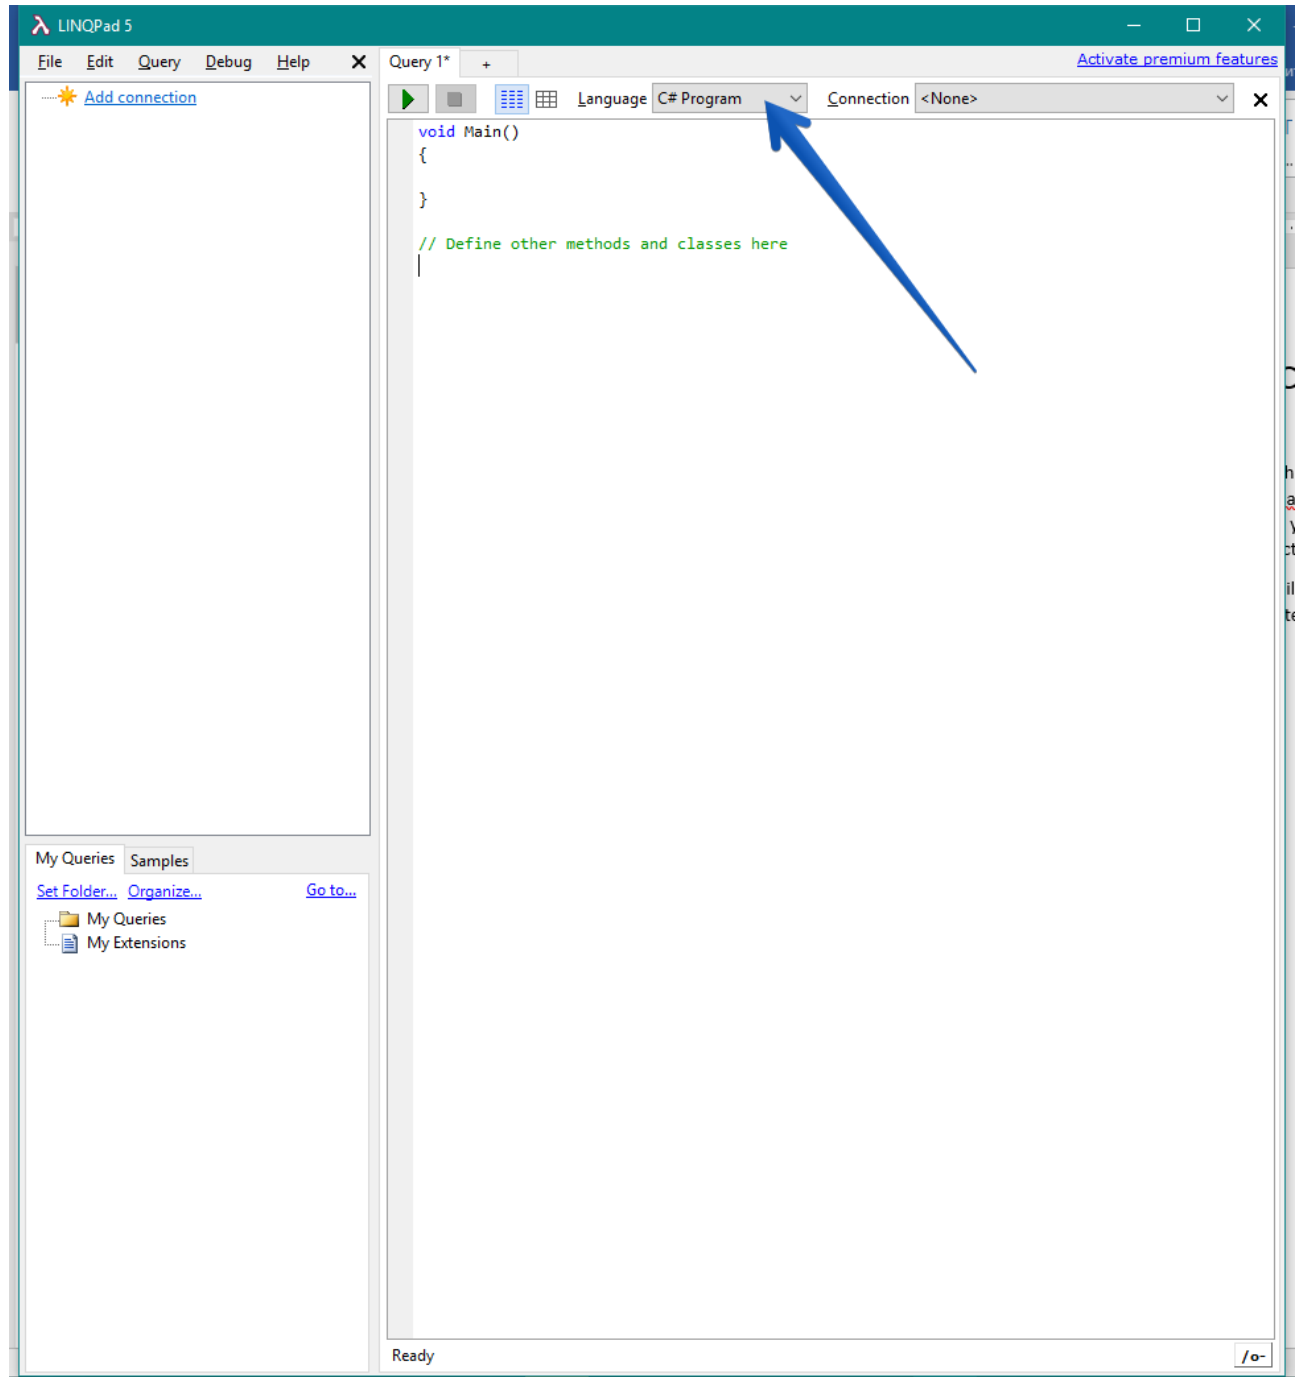

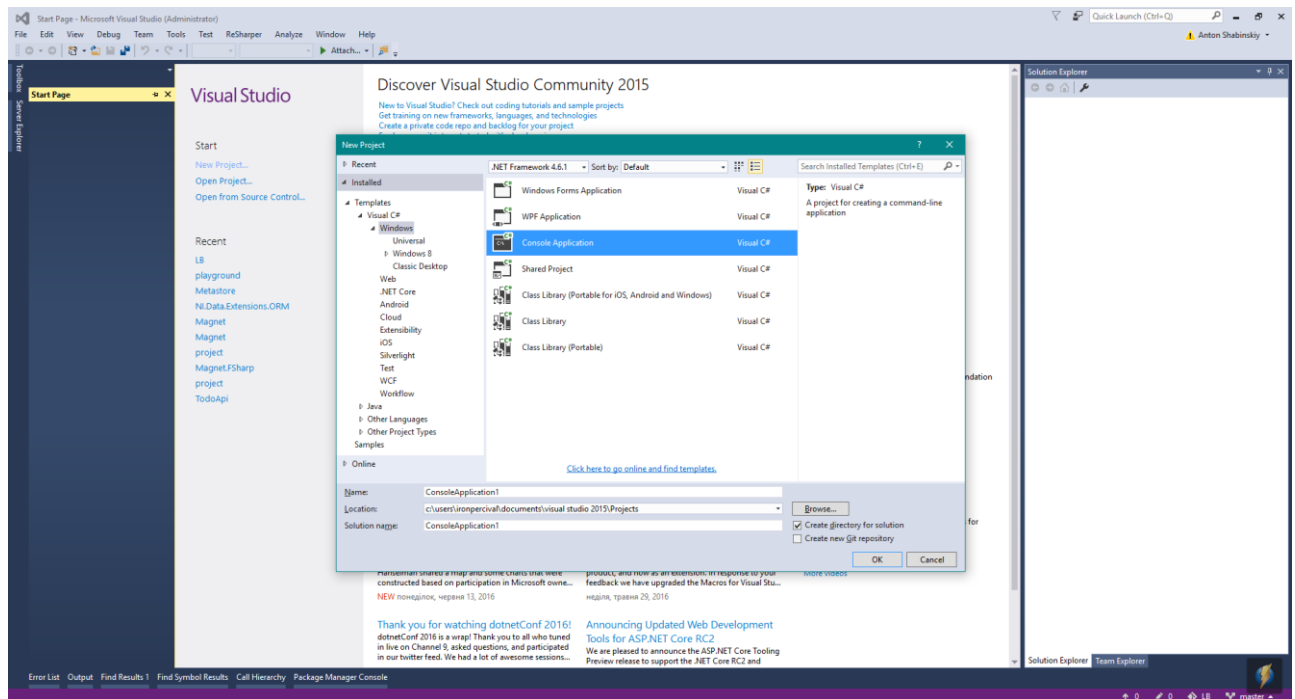

Tools

The primary recommended tool to your playing with C# and solving tasks is LinqPad
https://www.linqpad.net/ Make sure you use LinqPad 5! You will also need to install .Net Framework 4.6 (if you do not plan to install Visual Studio). In LinqPad, you can use C# Program mode to write simple programs easily without creating full Console projects in Visual Studio!

Though we really recommend using LinqPad, you still can choose to use Visual Studio 2015 Community Edition. It is free. If you do so, you will need to create a Console project.

Tasks Solution Files

Whatever tool you choose, you must follow one important rule: your solution for a task must be a single .cs file with all classes etc. and Main() method. That's all. No separate files, no archives, nothing else! Just 1 .cs file with all code! **Thus, you upload 1 file for each C# task on Distedu.**
